

Uncovering Talent, Driving Success

Position: Associate - Data Science

Technology Knowledge: SQL, Microsoft Excel, Python , Statistical Analysis

About ProcDNA

ProcDNA is a global consulting firm. We fuse design thinking with cutting-edge tech to create game-changing Commercial Analytics and Technology solutions for our clients. We're a passionate team of 425+ across 8 offices, all growing and learning together since our launch during the pandemic. Here, you won't be stuck in a cubicle - you'll be out in the open water, shaping the future with brilliant minds. At ProcDNA, innovation isn't just encouraged, it's ingrained in our DNA.

What we are looking for

We are seeking talented and highly motivated **Data Scientists** to join our dynamic team. As an entry-level data scientist, you will play a critical role in analyzing data, developing, and testing AI/ML models, and delivering valuable insights to drive data-informed decisions.

What you'll do

- Collect, clean, and process large datasets from multiple sources
- Develop and test advanced machine learning algorithms and models to solve problems in a computationally efficient and statistically effective manner
- Analyze and interpret data to identify trends, patterns, and insights by executing statistical and data mining techniques
- Visualize data and present findings to stakeholders
- Document code, models, and experiments to ensure reproducibility and maintainability
- Collaborate with cross-functional teams to identify business problems and develop data-driven solutions
- Communicate project progress and results to relevant stakeholders
- Stay up to date with the latest data science techniques and tools

Must have

- Currently enrolled in a Bachelor's/Master's program in Data Science, Computer Science, Statistics, Mathematics, or a related field
- Proficient in Python and must know about libraries like (Pandas, Scikit-Learn, Matplotlib, TensorFlow, etc.); SQL, R is a plus
- Should have relevant project work and/or internships with proven implementation of data science concepts
- Good understanding of data manipulation, statistical analysis, and machine learning concepts
- Ability to work independently and manage multiple tasks simultaneously
- Strong attention to detail, with a research-focused mindset
- Excellent critical thinking and problem-solving skills
- Excellent communication - should be able to describe findings to a technical and non-technical audience
- Familiarity with data visualization tools such as Tableau, Power BI or R Shiny is a plus
- High motivation and good work ethic is a must

Campus Hiring 2026-27
